Reviewer's report

Title: Prevalence of Pre- and Postpartum Depression in Jamaican Women.

Version: 2 Date: 10 October 2005

Reviewer: Anne Buist

Reviewer's report:

General
The changes have improved the quality of the article. I think just adding one line in after the first or second line of the discussion about the zung potentially picking up a higher number of depressions in a perinatal sample versus the general population is important.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after discretionary revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
