Reviewer’s report

Title: Association between the plasma/whole blood lead ratio and history of spontaneous abortion: a nested cross-sectional study

Version: 2 Date: 8 August 2007

Reviewer: Lorentz M. Irgens

Reviewer’s report:

General

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

I consider the author’s responses to my comments as adequate (even if I still disagree with respect to the categorization of the study, but refrain from further arguing). As my previous remarks were only minor, and taken well care of, I recommend the article to be published.

What next?: Accept without revision

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
