Reviewer's report

Title: Antenatal care and perinatal outcomes in Kwale district, Kenya

Version: 2 Date: 12 September 2007

Reviewer: Anthony K Mbonye

Reviewer's report:

This paper has been satisfactorily revised and the issues earlier raised have been addressed. However, there are a few minor issues which the authors should address. It is not necessarily to revert to me again over these minor issues.

1. On the abstract, the conclusion, the word “on” after Kwale region should be deleted.

2. Under the section methods, the paragraph beginning with “data management…… stata v7, v should be in full as “version 7”.

3. List of abbreviations, ITMN should be ITN

4. Table 1 on variables should be deleted and the contents included under the method section

5. Tables 2, and 3 the details of the chi–square values and F ratios may not be included in the tables
