Reviewer’s report

Title: Use of real time continuous glucose monitoring and intravenous insulin in type 1 diabetic mothers to prevent respiratory distress and hypoglycaemia in infants

Version: 4 Date: 17 April 2008

Reviewer: Kai J Buhling

Reviewer’s report:

Dear authors, many thanks for the response, I would appreciate to get more informations about the topics of my review:

Additionally I expect following topics:
- why do the authors give 5/18 graphics?
- what was the reason for betamethasone therapy?
- what was the indication for insuline therapy?
- why do the authors conclude that the sensor is useful when they do not state a therapeutical strategy, why is the sensor better than repaeted glucose measurements

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
