Reviewer's report

Title: Ovarian carcinoma associated with pregnancy: a clinicopathologic analysis of 23 cases and review of the literature

Version: 2 Date: 9 October 2007

Reviewer: Christer Borgfeldt

Reviewer's report:

Secondary Comments on Manuscript:
Ovarian carcinoma associated with pregnancy: a clinicopathologic analysis of 23 cases and review of the literature
The manuscript is improved but I have some minor comments.

Results:
Table 1 would still benefit from being sorted, according to histopathology and stage.

The conclusion may be more specific:
Early finding of achitis by ultrasound and persistent large ovarian mass during pregnancy may be related to malignancy and advanced stage. Pregnant women in advanced stage of ovarian cancer seem to have poor prognosis. Chemotherapy is not contraindicated during the second or third trimester, but the choice of couple must be considered.

What next?: Accept after discretionary revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
