Reviewer's report

Title: The role of cervical Electrical Impedance Spectroscopy in the prediction of the course and outcome of induced labour.

Version: 4 Date: 4 June 2009

Reviewer: Linas Rovas

Reviewer's report:

I would like to commend the authors for a great wish to achieve a goal

Minor Essential Revisions

Methods:

„Only women who had had a normal cervical smear in the 3 years prior to the study were recruited“ do you really think that cervical smear 3 years ago can reflect the current situation regarding cervical inflammatory process ?. I am not talking about PAP. In my opinion would be more clearly by writing “Only women who had had a normal cervical smear prior to the study were recruited”

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
