Reviewer's report

Title: Establishment and identification of rabbit model of peritoneal carcinomatosis from gastric cancer

Version: 2 Date: 13 January 2010

Reviewer: Sachio Fushida

Reviewer's report:

I think this orthotopic implantation model has been indeed suitable for research the progression of PC. Nevertheless the authors only described the point of similar clinical feature (pathological findings of PC have not contained). Furthermore, it has better to discuss academically about the mechanism of different progression of PC growth between 3 groups. In group A, the period of peritoneal seeding of cancer cells might be later than group B and C, because cancer cell disseminated after growth of primary lesion (submucosal injection).

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
