Reviewer's report

Title: Comprehensive profiling of DNA methylation in colorectal cancer reveals subgroups with distinct clinicopathological and molecular features

Version: 3 Date: 1 April 2010

Reviewer: Takeshi Nagasaka

Reviewer's report:

Authors answer my queries well. However, I still have a minor concern.

Results, p10:
“Indeed, no hMLH1 methylation was detected in both these cases.”
The authors added this sentence to answer my revision.
If authors would like to add this sentence, please notify which method was used to detect hMLH1 methylation.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
