Reviewer's report

Title: Development of an enzyme-linked immunosorbent assay for the detection of human calretinin in plasma and serum of mesothelioma patients

Version: 2 Date: 4 May 2010

Reviewer: Ettore Seregni

Reviewer's report:

Regarding the most relevant criticism i.e. the small number of mesothelioma patients in the study, the Authors have more than doubled the number of mesothelioma samples (from 18 to 42) and added another control group of 35 asbestos-exposed subjects. The conclusions are now well supported.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
