Reviewer's report

Title: Primary myxofibrosarcoma of the parotid: case report

Version: 1 Date: 3 March 2010

Reviewer: Thomas Kuhnt

Reviewer's report:

It is a first case description of a myxofibrosarcoma of the right parotid salivary gland.

The manuscript is well written. The case is clearly presented. The histopathological investigations are described in detail. The illustrations are informative. The patient has given his approval.

- Major Compulsory Revisions

Patients with soft tissue sarcoma has to be staged according to the 2002 American Joint Committee on Cancer (AJCC)- T stage, N stage, G, R, Depth. This needs to be inserted. There is still lack information on the resection- margin status. Even that has to be inserted.

Why no post-operative radiotherapy was performed? Please discuss briefly.
