Reviewer's report

Title: Malignant fibrous histiocytoma of the distal femur after an arthroscopic anterior cruciate ligament reconstruction: A case report and a review of the literature

Version: 5 Date: 21 May 2010

Reviewer: Anastasios Georgoulis

Reviewer's report:

> The authors have successfully and very academically addressed all my comments. Introduction and Discussion have been vastly improved, and the suggested Figure altering has been made. Now, it is clear for the reader that although there is not an evidence-based correlation between ACL reconstruction and MFH tumor appearance, a knee surgeon should always have in his mind, the existence of this rare clinical entity.

> In general, the authors have performed an excellent work in the reviewed manuscript and I propose that the paper can proceed for publication in its current form.
