Reviewer's report

Title: Monozygotic Twins with Neurofibromatosis Type 1, Concordant Phenotype and Synchronous Development of MPNST and Metastasis

Version: 1 Date: 7 April 2010

Reviewer: Meena Upadhyaya

Reviewer's report:

This is a clinical report on the monozygotic twins afflicted with NF1. The clinical details are well described, however, the authors have not discussed in detail other NF1 monozygotic twins described in the literature. Perhaps a better comparison of this report with previous studies may improve this manuscript.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
