Reviewer’s report

Title: Prognostic significance of lymphangiogenesis in laryngeal carcinoma patients

Version: 2 Date: 6 April 2010

Reviewer: David G Jackson

Reviewer’s report:

Major compulsory revisions
The authors have not included representative images of all the tumour types in their study and show only orpharyngeal and glottal examples. They should include images of laryngeal tumours. After all these were the ones that showed the greatest correlation between eg presence of emboli and nodal status etc. There is sufficient space to provide many more images and in greater detail than shown in the present version.

The authors have not responded to the request to compare stistically ILD with parameters such as disease specific survival.

Minor essential revisions

Please recheck for spelling mistakes
eg dicotomy should be dichotomy

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
