Reviewer’s report

Title: Skeletal metastasis diagnosed without bone pain showed fewer skeletal related events and death than those with bone pain in post-operative breast cancer patients

Version: 2 Date: 5 May 2010

Reviewer: francesco bertoldo

Reviewer’s report:

We appreciated the effort of the authors and the article has been partially improved by the authors although some comments could not completely answered as the design of the study. The paper is now suitable for publication even if, in my opinion with limited interest.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
