Reviewer’s report

Title: Involvement of hyaluronidases in colorectal cancer

Version: 2 Date: 12 May 2010

Reviewer: Sandor Spisak

Reviewer’s report:

The article by Bouga et al is an interesting, methodologically-oriented analysis comparing expression of different type of hyaluronidases using zymography and western blotting. Their expression was also examined by RT-PCR. Examine of macroscopically normal and cancerous tissues, high association of hyaluronidases in colorectal cancer was observed. This observation would be important in aspects from understanding the tumor developement and diagnostics of CRC.

The authors considered the suggested modification, therefore I suggest the acceptation of this manuscript.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
