Comments: This work shows some promise.
This work shows some promise.
My comments concern to the following items:

1. The author concluded that the expression of various mucin proteins related to malignant transformation or invasion in colorectal polyps. Are there any relationship between the expression of various mucin proteins and the size of adenoma?
2. The Authors should attempt to make a more detailed correlation to the expression of MUC6 and MUC5AC.
3. The conclusions are too generic.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
