Reviewer's report

Title: Complete response in gallbladder cancer to Erlotinib plus Gemcitabine does not require mutation of the epidermal growth factor receptor gene: a case report

Version: 1 Date: 1 August 2010

Reviewer: Tianshu Liu

Reviewer's report:

It is an interesting case report, which showed an amazing result of gemcitabine combined with erlotinib in the treatment of gall-bladder tumor. But it is only a case report, we cannot get such a solid conclusion as the author made. It is better to have a similar result in a series of patients.

This patient is EGFR wild type, but how about the frequency of mutaion of EGFR in gall-bladder cancer?

Figure 3 is not represented the mutation analysis, please check.

Level of interest: An article whose findings are important to those with closely related research interests
