Reviewer's report

Title: Tumor location and patient characteristics of colon and rectal adenocarcinomas associating survival with TNM classes

Version: 2 Date: 26 October 2010

Reviewer: Kho Patricia

Reviewer's report:

Minor Essential revisions

1. The title does not convey the aims of the study and remains slightly confusing.

2. On page 4, under "subjects and Methods" the authors used the term "are believed to approach 100\%". It would be better if the authors gave a no. % as this does not tell us how accurate the data collection is. similarly, the term "somewhat" used on Pg 8 is non-specific.

3. The cohorts still remain very confusing. Data is retrieved from the registry from 1958 - 2008 but survival analysis done on cohort from 2000 - 2008 and another cohort for TMN analysis is from 2002 - 2008 but later amended to 2004 - 2008 due to poor collection in the 1st 2 years.

In addition, the nos. in the cohort do not seem to tally - on pg8, there is 10174 subjects with TNM data but on page 7, there is 6105.

It might be less confusing to state fewer dates and use cohorts starting from the same time.

Minor discretionary revisions

The paper is still fairly difficult to read due to the language.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
