Reviewer's report

Title: Seminal vesicle metastasis after partial hepatectomy for hepatocellular carcinoma

Version: 3 Date: 14 October 2010

Reviewer: Hans Spangenberg

Reviewer's report:

The reviewers have addressed some of the points that have been mentioned. However, the presentation of the case is still confusing, the chronicity of the history of the patients is not clearly shown, the applied treatment seems not to be in consensus with the international guidelines (especially the new paragraph on page 8). Furthermore the authors were not able to show convincingly that the HCC formation in the seminal vesicle was truly a metastasis or just a peritoneal metastasis since additional peritoneal metastases were reported.

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
