Reviewer’s report

Title: Increased expression of Transcription Factor TFAP2 alpha correlates with chemosensitivity in advanced bladder cancer

Version: 2 Date: 5 March 2011

Reviewer: srikala sridhar

Reviewer’s report:

This manuscript is now better written. Most of the previously raised concerns have been addressed. In the conclusion, final sentence there should be more detailed information about the ongoing project, in terms of what genes (eg. BAX, K-67, p53 etc.) will be specifically studied. A comment about the clinical implications of this research would also strengthen this paper.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
