Reviewer’s report

Title: STAT6 expression in glioblastoma promotes invasive growth

Version: 2 Date: 15 March 2011

Reviewer: Ian Lorimer

Reviewer’s report:

Overall the authors have addressed the concerns raised in my initial review. There are two minor essential revisions that I feel should be added before the paper is accepted:

1. On page 20-21, in the comment on the data in Figures 7B and 7C, it is stated that “statistical significance is not reached due to insufficient sample size”. This should be revised, as this is only one possible explanation for the lack of statistical significance.

2. On pages 21 and 24, the data are presented more objectively if trends are simply described as “trends” and are not described as “clear” or “readily-observable” trends.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
