Reviewer's report

Title: Systemic Chemotherapy for Treatment of Advanced Small Bowel Adenocarcinoma with Prognostic Factor Analysis: Retrospective study

Version: 1 Date: 8 February 2011

Reviewer: Thomas Yau

Reviewer's report:

This is a well-written article which give the readers more insights about the systemic management of advanced small bowel adenocarcinoma.

I only have few questions like to clarify with the authors:

1. Methods: Can you explain why 238 patients screened and only 91 patients fulfilled all the inclusion criteria? Is there any selection bias?

2. Although the authors have tried to adjust all the clinical factors by using IPTW method, there is still potential bias in comparing the two groups. I think the authors should put more words in addressing this caveat in the discussion part.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
