Reviewer’s report

Title: Bilateral ovarian teratoma complicated with carcinosarcoma in a 68 year old woman: a case report

Version: 2 Date: 14 January 2011

Reviewer: Ardeshir Hakam

Reviewer’s report:

In response to author’s 1st response:
1) The diagnosis of mature and immature teratoma should be based on the pathologic examination, when and if there is a tissue diagnosis.

The title indicates ovarian teratoma and it is fine. However, It is appropriate and necessary to reflect the immature teratoma in the body of the text instead of mature teratoma.

2) Other responses are acceptable.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
