Reviewer's report

Title: Expression of Phosphorylated Raf Kinase Inhibitor Protein (pRKIP) is a Strong Predictor of Lung Cancer Survival

Version: 1 Date: 3 February 2011

Reviewer: Fumiya Hongo

Reviewer's report:

The manuscript submitted by Sara Huerta-Yepez and colleagues is a well written and thoughtful analysis of predicting factor of lung cancer. The manuscript is informative,& the authors should correct the following issues:

1) Page 11: "Figure 2A-D and 2E-H show .." There is only 2A-F on figure 2.
2) Page 11 Does figure 2-I mean figure 3G?
3) Page 12: Does figure 2J mean figure 3B?
4) Page 13 and Figure 4: Does figure 3 mean figure 4?
5) figure 3: there is no difference between normal epithelium, primary non-small cell lung cancer. Author should address the results. Reasonable discussion should be needed.

This manuscript should be accepted after minor revisions.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
