Reviewer's report

**Title:** Clinicopathological and prognostic significance of HER-2/neu and VEGF expression in colorectal carcinomas

**Version:** 2  **Date:** 15 December 2010

**Reviewer:** Meena Jhanwar-Uniyal

**Reviewer's report:**

Manuscript by Li et al describes the expression of VEGF and HER-2/neu in colorectal carcinoma and concluded that these expressions do not carry the prognostic significance. Manuscript is well defined however only the expression of VEGF was presented in figure form. This study does not add any substantial information in already existing literature. There are several editorial corrections which were not addressed prior to the submission. Overall this manuscript does not carry significant merit to be published in this journal.
