Reviewer's report

Title: Repression of human Activation Induced cytidine Deaminase by miR-93 and miR-155

Version: 1 Date: 28 May 2011

Reviewer: Elisa Giovannetti

Reviewer's report:

The manuscript by Borchert and colleagues is a well-written paper on the regulation of AID by miR-93 and miR-155. Furthermore, the characterization of an obscured miR-93 target site located within the 3'UTR of AID supports the recent hypothesis that many miRNAs regulations have been overlooked due to truncated 3'UTR annotations. The title and abstract accurately describe what has been found. The methods and data are well presented. The discussion and conclusions are appropriate and supported by the data. The cited literature is up-to-date and properly discussed.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
