Reviewer's report

Title: Repression of human Activation Induced cytidine Deaminase by miR-93 and miR-155

Version: 2 Date: 25 July 2011

Reviewer: Paolo Gandellini

Reviewer's report:

In the revised version of the manuscript, the authors addressed the major point raised by the referee, specifically they performed an additional luciferase experiment to strengthen their hypothesis of a direct regulation of AID by miR-93 and miR-155. As a consequence, I think that the paper can be now accepted for publication.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
