Reviewer's report

Title: SOX2 Expression Correlates with Lymph-Node Metastases and Distant Spread in Colon Cancer

Version: 1 Date: 2 September 2011

Reviewer: Jahn M Nesland

Reviewer's report:

The authors should separate Discussion and Results.

My main concern is the material.
A material with follow up information should be presented.
What is the outcome for the various groups (beta-cat and Sox2 pos, beta cat pos and Sox2 neg etc)
What about the double positive group?
Cytoplasmic staining for Sox2 was not evaluated!
Why. The authors need to clarify?
