Reviewer's report

Title: Integrated mutation, copy number and expression profiling in resectable non-small cell lung cancer

Version: 2 Date: 25 December 2010

Reviewer: Ruprecht Kuner

Reviewer's report:

1. It would be a good practise to provide dataset access in GEO to the reviewer (only read modus option).
2. The manuscript remains very descriptive, however, reduction of the result section and a focus on the most reliable data was done.
3. Figure 3a and 3b is not properly cited in the text. p-value and the number of cases in each arm should be noted in the figure.
4. Section: INTEGRATION OF GENOMIC AND TRANSCRIPTIONAL PROFILES
   The authors did not perfomed integrative analysis, rather they focused on transcripts in aberrant loci. One question persist: Did you test if the overlap is a significant finding or rather by chance? Does it mean that the gain at 3q has the strongest consequences on the transcriptomal level?

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
