Reviewer's report

Title: Mesenchymal and stemness circulating tumor cells in early breast cancer diagnosis

Version: 1 Date: 13 September 2011

Reviewer: Mikael Kubista

Reviewer's report:

The paper describe very well performed work using established and reliable technology. The findings reported are most interesting and relevant. It absolutely deserves publication. But the language is poor. Some paragraphs are even difficult to understand. It must be substantially improved before publication is possible.

Level of interest: An exceptional article

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.
