Reviewer's report

Title: Estimates of cancer incidence, mortality and survival in Aboriginal people from NSW, Australia

Version: 7 Date: 21 February 2012

Reviewer: Judith S Jacobson

Reviewer's report:

As before, the paper may hold a lot of interest for readers interested in racial/ethnic disparities in cancer outcomes. The research question is how do the Aboriginal and non-Aboriginal populations of New South Wales, Australia compare with respect to cancer incidence, mortality, and survival. The methods are appropriate and well described and the data appear valid. The authors acknowledge the limitations and review the relevant literature appropriately. The authors have responded well to the prior reviews.

Minor Essential Revisions: The writing is a bit sloppy, but copy editing can easily take care of the glitches.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
