Reviewer's report

Title: Mifepristone prevents repopulation of ovarian cancer cells escaping cisplatin-paclitaxel therapy

Version: 1 Date: 11 April 2012

Reviewer: Sergio Marchini

Reviewer's report:

The work done by Luques C et al is focused on defying the mechanism of action of the synthetic steroid mifepristone in a panel of different ovarian cancer cell lines, in combination with cDDP and PTX. As a general comment the paper is very well written and lot of data to support the conclusions. No other comment is required
