Reviewer’s report

**Title:** Phospho-specific flow cytometry identifies aberrant signaling in indolent B-cell lymphoma

**Version:** 1  **Date:** 30 September 2012

**Reviewer:** Giovanni Carulli

**Reviewer’s report:**

This is a very interesting paper, carried out in a limited number of cases but well supported by strong data obtained by means of well-done experiments.

The questions posed by the authors are well defined and are of great interest for researchers involved in B-cell lymphomas pathogenesis.

In my opinion, methods are appropriate, results are well described and clearly discussed, figures and tables clearly show the results obtained. These, in turn, could be useful for differential diagnosis if validated by further studies.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests.
