Reviewer’s report

**Title:** Hypofractionated stereotactic radiotherapy of limited brain metastases: A single-centre individualized treatment approach

**Version:** 1  **Date:** 20 August 2012

**Reviewer:** Dirk Rades

**Reviewer’s report:**

The authors report on a topic that is quite important for radiation oncologists. The methods are sound, and the conclusions are clearly stated.

I have only two minor comments:

1. In the discussion, the authors should include statements regarding the limitations of their study (relatively small number of patients, mono-institutional series, potential risk of selection biases due to the retrospective design).

2. The manuscript should be reviewed by a native speaker.

**Level of interest:** An article of importance in its field

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests.
