Reviewer's report

Title: Risk factors for nasal malignancies in German men - The South-German Nasal Cancer Study

Version: 2 Date: 26 August 2012

Reviewer: Wolfgang Hoffmann

Reviewer's report:

Greiser et al.: Risk factors for nasal malignancies...

In their letter the authors have addressed all points raised in my review. Changes in the revised version of the manuscript are appropriate. Over all the manuscript has considerably improved and should now be published conditional on corrections of some small remaining points:

P 7, 2nd para, line 7: Please state in parentheses the number of cases who received printed questionnaires.

P 8 Results section, line 7: one of the two “of these” should be deleted
Line 10: please state how the 2 controls, who met the inclusion criteria as cases were treated in the analysis

Table 3: check categories of packyears – presently “<8.7” and “8.6-<14.5”

Tab. 9, footnote: “Per 1 year of exposure to …..” – please add",respectively.

Level of interest: An exceptional article

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
