Reviewer's report

Title: Rare case of primary clear cell sarcoma of the pubic bone with appearance of small round cell tumor: an unusual morphologic variant

Version: 1  Date: 19 May 2012

Reviewer: Russell Gollard

Reviewer's report:

I honestly think that only a few revisions:
1. spell metastases correctly (page 7)
2. the treatment is strange. Why such a novel regimen?
3. why wasn't radiation therapy used?
4. How does histology affect treatment choice?
5. Why wasn't a melanoma regimen used"

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
