Reviewer's report

**Title:** Overexpression of SERBP1 (Plasminogen activator inhibitor 1 RNA binding protein) in human breast cancer is correlated with favourable prognosis

**Version:** 2  **Date:** 29 November 2012

**Reviewer:** Yiannis Drosos

**Reviewer's report:**

The authors have responded to all comments of the reviewers. Some of the findings are preliminary and need further investigation but definitely worth reporting. The manuscript is suitable for publication in BMC Cancer with a discretional revision:

1. The phrase “…SERBP1 is a putative tumour suppressor gene…” is an overstatement and should be rephrased.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests
