Reviewer's report

Title: Uptake of a web-based oncology protocol system: How do cancer clinicians use eviQ Cancer Treatments Online?

Version: 2 Date: 11 February 2013

Reviewer: Morgan Sellers

Reviewer's report:

The article describes an initial analysis of the usage patterns of an online oncology decision support tool. The reported observations include the total number of users and basic patterns of use. The findings are limited by lack of granularity in the collected data, but reflect the type of groundwork necessary to understand and study the impact of this and similar widely-proliferating decision support tools.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
