Reviewer's report

Title: Constitutional CHEK2 Mutations are Infrequent in Early-Onset and Familial Breast/Ovarian Cancer Patients from Pakistan

Version: 1 Date: 5 March 2013

Reviewer: Rodney J. Scott

Reviewer's report:

The article essentially reports that CHEK2 mutations are rare in the Pakistani population - so rare that not much can be said about disease penetrance. It is my impression that the article is too long and should by shortened so that it is a short report, not a full paper.

The article is well written.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
