Reviewer's report

Title: Perceived Benefits and Barriers to Exercise for Recently Treated Patients with Multiple Myeloma: A Qualitative Study

Version: 3 Date: 16 April 2013

Reviewer: Gill Mein

Reviewer's report:

There are no major revisions.

Minor revisions.

Abstract: line 46-should specify if these activities were before or after treatment.
lines 49-52 the language/grammar could be improved.

Line 79 - what is meant by induction regimen
Lines 275 and 286 are the same

lines 302-307 this quote is not very helpful. I would exclude it.
line 464 and 309 are the same.

Line 476 second sentence should begin "We found"
line 489 should read "in this study"

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
