Reviewer's report

Title: Association between Variations in the Fat Mass and Obesity-Associated Gene and Pancreatic Cancer Risk: A Case-Control Study in Japan

Version: 2 Date: 8 May 2013

Reviewer: Wenqing Li

Reviewer's report:

The manuscript now looks much better than the previous version. I have two minor points:

1) Table 3 and 4 should be merged--they actually conveyed the exactly same information.

2) Adjustment for sex should be sex (male or female), rather than sex (continuous variable) because sex is dichotomous.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I have no competing interests.
