Reviewer’s report

Title: Synergistic effect of anti-angiogenic and anti-erbbs treatment in orthotopic models of human testicular germ cell tumors

Version: 1 Date: 21 March 2013

Reviewer: Friedemann Honecker

Reviewer’s report:

Minor Essential Revisions

The manuscript contains novel and interesting data on an unresolved issue - cisplatin resistance in germ cell cancer. Experiments and methods are clearly described, the results are presented in an appropriate way, and the list of references includes all important data that the work is either building on or extends. The main criticism is that there are several spelling mistakes and stylistic flaws, which could be resolved by a native English speaker.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
