Reviewer's report

**Title:** Selenized milk casein in the diet of BALB/c nude mice reduces growth of intramammary MCF-7 tumors.

**Version:** 1  **Date:** 17 June 2013

**Reviewer:** Gerhard Schrauzer

**Reviewer's report:**

This paper will become acceptable for publication but the authors need to include and discuss at least one literature reference by G.N.Schrauzer such as e.g. the one which appeared in Critical Reviews in Biotechnology, 2009, 29(1): 10-17, entitled 'Selenium and selenium-antagonistic elements in nutritional cancer prevention'. In its present form, the paper by J.M.Warrington et al. insufficiently reflects the available evidence in this field.
