Reviewer’s report

**Title:** Separate episodes of capillary leak syndrome and pulmonary hypertension after adjuvant gemcitabine and three years later after nab-paclitaxel for metastatic disease

**Version:** 1 **Date:** 11 September 2013

**Reviewer:** Mario Scartozzi

**Reviewer’s report:**

This case report is well documented and written. Although capillary leak syndrome can occur very rarely, we believe that Clinicians should be aware of this potentially deadly adverse event along with all possible consequences on the subsequent management of the patient affected.

Minor, non compulsory revision: a table/figure summarizing clinical history along with timeline of medical events would make the case easier to appreciate for the general reader.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

No conflict of interest to declare
