Reviewer’s report

Title: Patient side cost and its predictors for cervical cancer in Ethiopia: A cross sectional hospital based study.

Version: 4 Date: 17 January 2013

Reviewer: Hajer Aounallah-Skhiri

Reviewer’s report:

I thank the Authors who had nicely addressed the majority of comments. The quality of the manuscript was improved.

But other revisions are still needed for further improvements:

- The number of patients was not the same for each type of calculated cost (table 6): is it a missing data or it means that those "not counted" have a cost equal to zero? in the first case (missing data), you should talk about selection biais in the limitations paragraph (discussion chapter ); in the last case the average cost must concern all of the women.

-Authors should revise the manuscript for language corrections.

since the limitation paragraph was too general and not exhaustive (surgical treatments ignored, selection biais... ), also the sampling method is still not clear (the number of subjects included, period of time for computing the cost??)

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
