Reviewer’s report

**Title:** Plasmacytoid variant of bladder cancer defines patients with poor prognosis if treated with cystectomy and adjuvant cisplatin-based chemotherapy

**Version:** 2 **Date:** 17 December 2012

**Reviewer:** Giovanni Lughezzani

**Reviewer’s report:**

The authors replied to all reviewers’ comments. The manuscript has been substantially improved.

Just one comment regarding table 2: I think it carries way too many data and it would be difficult to be read and understood by most of the readers. The authors should simplify their table by reporting data that are really useful for the readership (such as p-value and hazard-ratios).

In addition, it appears that the table was directly cut and pasted from SPSS which make the table even more difficult to be read.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
