Reviewer’s report

Title: Superparamagnetic iron oxide nanoparticles mediated 131I-hVEGF siRNA inhibits hepatocellular carcinoma tumor growth in nude mice

Version: 3 Date: 4 December 2013

Reviewer: Oleg Lunov

Reviewer’s report:

Jing Ch. et al., describe approach for real-time tumor monitoring, gene therapy, and internal radiotherapy using superparamagnetic iron oxide nanoparticles. Indeed, studies of production new nano-based contrast agents are very valuable and up-to-date. Thus, it is an interesting and very important topic. The authors did improve the manuscript greatly, therefore it is now acceptable for publishing.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
