Reviewer's report

Title: Serum soluble ST2 is a new potential immune-related marker for breast cancer

Version: 1  Date: 4 October 2013

Reviewer: Miodrag Lukic

Reviewer's report:

The results presented in this paper are worth publishing but the text requires extensive revision by native English speaker. Discussion should be rewritten and more focused. Also, references in the text are mentioned in an unusual way. I would be happy to look at the improved version of the paper.

Thus paper needs major compulsory revision. Statistical review was not done by this reviewer but it is essential that the manuscript be reviewed by an expert statistician.
