Reviewer’s report

Title: Identification of genes regulating migration and invasion using a new model of metastatic prostate cancer

Version: 2 Date: 17 April 2014

Reviewer: Ashok Pullikuth

Reviewer’s report:

The authors have made a good faith attempt to address most of the concerns raised during the initial review and made some headway in implicating potential signaling mechanisms involved downstream of the identified candidates. These and other changes have vastly improved the manuscript. Since additional mechanistic data, although would have bolstered the manuscript heftily, might not be achievable within a time frame as the authors' point out.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
