Reviewer's report

Title: Metachronous isolated breast metastasis from pulmonary adenocarcinoma with micropapillary component causing diagnostic challenges

Version: 2 Date: 19 August 2014

Reviewer: Zaibo Li

Reviewer's report:

Minor Essential Revisions:
1. It is better to describe the detailed molecular mutation of EGFR on this metastasis.
2. Wondering if there was any molecular analysis on the original lung adenocarcinoma specimen. If available, would like to compare the results to those from current specimen.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
